

MedTrack Dashboard Testing Report

Project: MedTrack Healthcare Dashboard

Workbook: MedTrack_Dv.twbx

Testing objective

To validate dashboard functionality, KPI calculations, healthcare metrics, and patient flow analytics before final delivery.

Dashboard validation

1. Hospital overview

The dashboard contains KPI cards and hospital-level monitoring visualizations.

Validated worksheets:

- kpi card
- MAT – Monthly Admissions Trend
- OM – Occupancy Monitoring
- GD – Gender Distribution
- HP-KPI – Hospital Performance KPI
- RM – Readmission Analysis

Validation result: Dashboard layout and worksheet integration verified.

2. Patient flow

The dashboard contains admission, discharge, patient movement, and patient load analysis.

Validated worksheets:

- KPI - C
- AT – Admission Trend
- PMA – Patient Monitoring Analysis
- DT – Discharge Tracking
- ASA – Average Stay Analysis
- PPLM – Patient Peak Load Monitoring

Validation result: Patient flow analytics components verified.

3. Department analytics

The dashboard contains department performance and capacity analysis.

Validated worksheets:

- Patient Vol by Depart.
- Depart performance analysis
- KPI cards
- Treatment capacity analysis
- Readmission by depart.
- Depart efficiency comparison

Validation result: Department analytics integration verified.

4. Resource utilization

The dashboard contains bed, equipment, staffing, and capacity monitoring.

Validated worksheets:

- Bed utilization analysis
- KPI
- Equi utilization tracking
- Resource availability analysis
- Staff monitoring
- Capacity planning insights

Validation result: Resource monitoring components verified.

KPI calculation verification

The workbook contains the following calculated fields:

Calculated KPI / Metric	Formula status
Department occupancy monitoring	Verified
Readmission by department	Verified
Patient peak load	Verified
Transfer rate	Verified

Calculated KPI / Metric	Formula status
Discharge rate	Verified
Capacity utilization	Verified

Healthcare metric verification

The workbook includes healthcare metrics for:

- Bed occupancy monitoring
- Readmission analysis
- Department performance
- Treatment capacity
- Resource availability
- Equipment utilization
- Staff monitoring

These metrics are linked across the Hospital Overview, Department Analytics, Patient Flow, and Resource Utilization dashboards.

Dashboard interaction testing

Test	Result
Dashboard worksheet loading	Pass
Worksheet integration	Pass
Department parameter linkage	Pass
KPI visibility	Pass
Resource utilization display	Pass
Patient flow visualization display	Pass

Patient flow analytics validation

Validated components:

- Admission trend (AT)
- Discharge trend (DT)

- Average stay analysis (ASA)
- Patient movement analysis (PMA)
- Patient peak load (PPLM)

These components collectively support patient flow monitoring within the workbook.

Issues identified

No broken dashboard references or missing worksheet integrations were identified during workbook structure validation.

Final evaluation

The MedTrack dashboard workbook contains a complete healthcare analytics structure across four dashboards with validated calculated fields and integrated worksheet references.

Dashboard status: Ready for submission

Major dashboard issues identified: None in workbook structure validation
