Review Sources & Design Notes

Review all data sources, Patient Data, Department_KPIs and Dashboard_Fields.

Important data-quality note: occupancy and bed-capacity fields are blank in the supplied KPI summary/department KPI output. The storyboard therefore shows these areas as planned visuals requiring validation before production deployment.

Hospital Overview

AVERAGE LENGTH OF STAY

5.4 days

dataset KPI

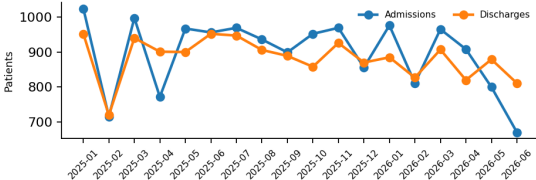

READMISSION RATE

7.6%

dataset KPI

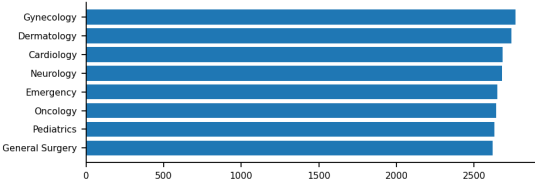

ADMISSIONS TREND

Monthly admissions with optional date-range comparison

ADMISSIONS BY DEPARTMENT

Volume ranking; click department to cross-filter

STORYBOARD SPECIFICATION

Purpose: Executive landing page for a fast hospital performance read.

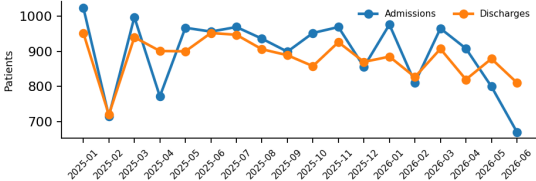

Navigation: Default landing page. Top navigation switches to Patient Flow, Department Analytics and Resource Utilization.

Actions: Apply filters, reset, export dashboard, drill from department to patient-level detail, share/bookmark view.

Design decision: Keep the four headline KPIs visible at all times. Do not invent an occupancy percentage while the supplied capacity fields are blank.

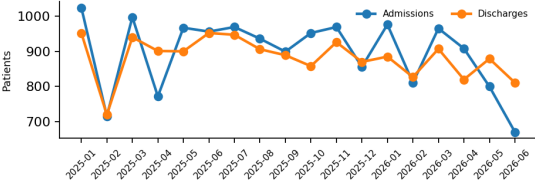

MONTHLY ADMISSIONS VS DISCHARGES

Dual-series comparison; discharge dates are available for the flow view

READMISSION & OCCUPANCY TREND

Planned trend area; occupancy requires validated bed fields

non-null dates

AVERAGE STAY

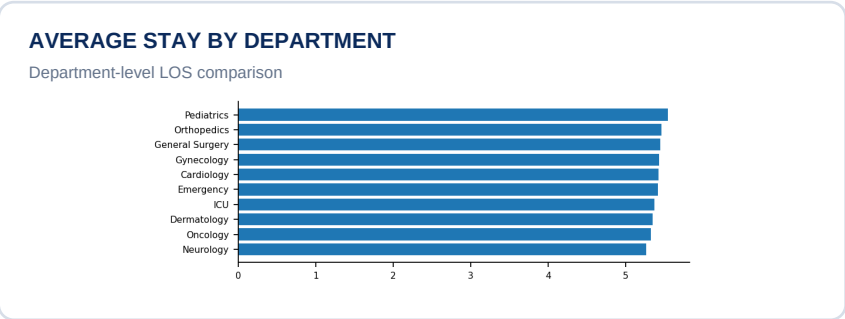

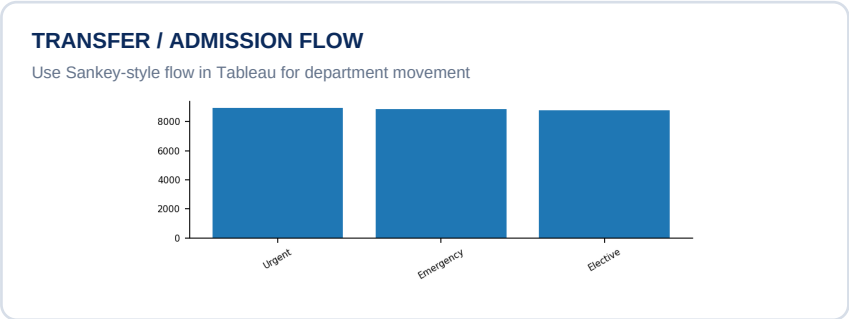

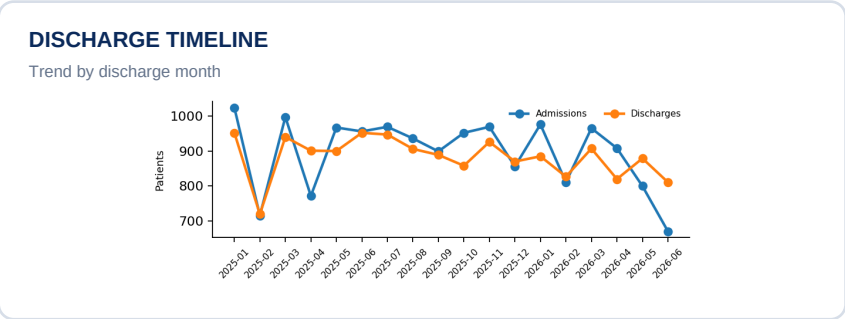

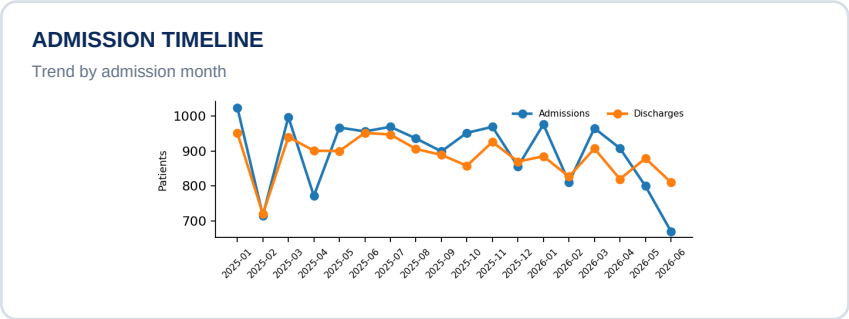

5.4 days

patient-level mean

TRANSFERS

0

flagged records

STORYBOARD SPECIFICATION

Purpose: Explain how patients move through the hospital from admission to discharge and transfer.

Department comparisons: Select one or multiple departments to compare LOS, admissions and transfers. Use a highlight action rather than duplicating charts.

Dashboard actions: Timeline selection filters the rest of the page; clicking a department drills to patient-level records; hover shows exact counts.

Peak Patient Load: Add a daily/weekly patient-load visual when an agreed operational definition is confirmed.

CAPACITY UTILIZATION

Planned capacity view; requires validated capacity fields

READMISSION HEATMAP

Use department × severity/outcome as a comparison grid

STORYBOARD SPECIFICATION

Purpose: Compare departments on volume, efficiency, length of stay and readmission performance.

Recommended comparison: Department is the primary comparison dimension. Enable single-select for focused analysis and multi-select for benchmarking.

Key interaction: Clicking a department in any chart cross-filters all visuals. Add a tooltip with admissions, LOS, readmission rate and efficiency score.

Billing by Department: Add a ranked billing chart from the Billing Amount field once the billing grain and missingness are

validate ICU capacity

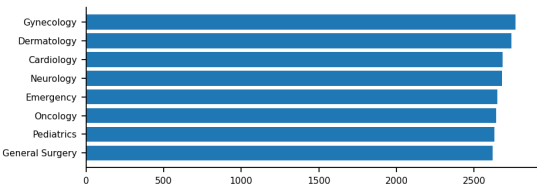

EQUIPMENT STATUS

Planned status distribution from equipment inventory

STAFF ALLOCATION

Planned department allocation view

STORYBOARD SPECIFICATION

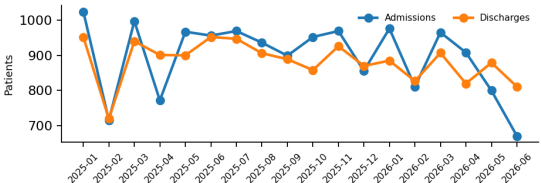

Purpose: Monitor whether beds, staff, equipment and ICU capacity are being used effectively.

Critical data dependency: The supplied workbook contains planned resource fields, but the KPI summary and department KPI outputs show blank bed-capacity/occupancy measures. These visuals should remain clearly marked as pending validation rather than showing fabricated values.

Capacity Planning: Use a capacity-vs-demand view with threshold bands once available-bed, occupied-bed and ICU-capacity data are

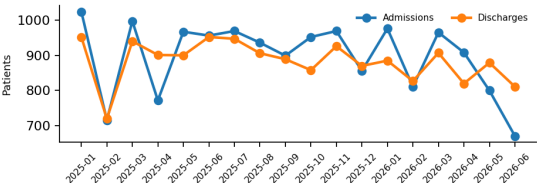

BED USAGE

Planned occupied vs available beds trend

ICU OCCUPANCY

Planned ICU occupied vs capacity trend
