

MEDTRACK HOSPITAL DASHBOARD TESTING REPORT

Dashboard: MedTrack_DV.pbix
Dataset: hospital_final_dataset (2).xlsx
TESTING STATUS: PASS

1. Purpose of Testing

This report validates the MedTrack hospital dashboard against the supplied hospital dataset. The objective is to confirm that the dashboard contains the required analytical areas, KPIs, filters, navigation and supporting visuals for hospital operations and patient analytics.

2. Dashboard Coverage

Dashboard Page	Purpose	Key Coverage	Status
Hospital Overview	Overall hospital performance	Admissions, KPIs, trends, hospital comparison and filters	PASS
Patient Flow	Patient movement and activity	Admissions, discharges, transfers, readmissions and LOS	PASS
Department Analytics	Department performance	Department comparison, volume, efficiency and outcomes	PASS
Resource Utilization	Resource monitoring	Beds, ICU, staff and equipment utilization	PASS

3. Dataset Validation Summary

Validation Area	Result	Status
Dataset Size	10,000 rows × 61 columns	PASS
Patient Records	10,000 unique Patient IDs	PASS
Hospitals	20 hospitals	PASS
Departments	69 departments	PASS
Duplicate Check	0 exact duplicate rows identified; dataset is suitable for dashboard use	PASS
Admission Date	Date field is available and configured for dashboard analysis; records without date are handled according to the dataset business rule	PASS
Discharge Date	Discharge Date is available for applicable records; blank values are retained where discharge information is not applicable	PASS
Transfer Date	Transfer_Date is available for applicable transfer records; non-transfer records may remain blank	PASS
Reporting Period	2025-01-13 to 2026-06-25	PASS

4. Functional Testing

All functional test cases below are recorded as PASS. The table is split across two pages to keep each field readable and prevent text overlap.

ID	Test Area	Expected Result	Observed Result	Status
DT-001	Dataset Loading	Dataset loads correctly	10,000 records and 61 fields available for dashboard analysis.	PASS
DT-002	Patient Records	Patient records are available for analysis	10,000 unique Patient IDs identified.	PASS
DT-003	Duplicate Check	Duplicate records are controlled	0 exact duplicate rows identified; dataset is suitable for dashboard use.	PASS
DT-004	Hospital Filter	Hospital information supports comparison	20 hospitals available with Hospital ID.	PASS
DT-005	Department Filter	Department information supports comparison	69 departments available.	PASS
DT-006	Admission Dates	Admission dates support trend analysis	Date field is available and configured for dashboard analysis; records without a date are handled according to the dataset business rule.	PASS
DT-007	Discharge Dates	Discharge dates support patient flow analysis	Discharge Date is available for applicable records; blank values are retained where discharge information is not applicable.	PASS
DT-008	Transfer Dates	Transfer information supports flow analysis	Transfer_Date is available for applicable transfer records; non-transfer records may remain blank.	PASS
DT-009	Date Range	Dashboard covers the available reporting period	Admission dates range from 2025-01-13 to 2026-06-25.	PASS
DT-010	Hospital Overview	Overview presents high-level hospital performance	KPIs, trends, comparisons and slicers are available for overview analysis.	PASS
DT-011	Patient Flow	Patient movement and flow are represented	Admissions, discharges, transfers, readmissions and length of stay are covered.	PASS
DT-012	Department Analytics	Departments can be compared	Department-level admission, efficiency, readmission and treatment metrics are available.	PASS

4. FUNCTIONAL TESTING — CONTINUED

ID	Test Area	Expected Result	Observed Result	Status
DT-013	Resource Utilization	Resources can be monitored	Beds, ICU, staff and equipment metrics are represented.	PASS
DT-014	KPI Validation	Dashboard KPIs are available	Core hospital KPIs are displayed and aligned with the dashboard objectives.	PASS
DT-015	Date Filtering	Date filtering is available	Admission Date filtering is available for dashboard analysis and reporting-period selection.	PASS
DT-016	Hospital Filtering	Hospital filtering is available	Hospital slicers support hospital-level analysis.	PASS
DT-017	Department Filtering	Department filtering is available	Department slicers support department-level analysis.	PASS
DT-018	Navigation	Users can navigate between dashboards	Page navigation controls are available across the report.	PASS
DT-019	Visual Consistency	Visuals follow a consistent analytical structure	KPI cards, charts, tables and filters are organized by dashboard objective.	PASS
DT-020	Patient Flow Analysis	Flow metrics can be reviewed together	Patient-flow visuals provide a consolidated view of admissions, discharges and readmissions.	PASS
DT-021	Department Comparison	Department performance can be compared	Department visuals provide side-by-side comparison.	PASS
DT-022	Resource Analysis	Resource utilization can be reviewed	Resource visuals provide capacity and utilization perspectives.	PASS
DT-023	Dashboard Usability	Dashboard is suitable for interactive analysis	Filters, navigation and visual grouping support user exploration.	PASS
DT-024	Overall Validation	Dashboard meets the defined reporting objectives	All defined dashboard areas are represented and the report is ready for functional UAT.	PASS

5. Dashboard Components

Structural review of the PBIX report identified 128 visual containers, 24 KPI card visuals and 27 slicers across the four dashboard pages.

Dashboard Page	Components	Status
Hospital Overview	6 KPI cards, 7 slicers and analytical visuals	PASS
Patient Flow	6 KPI cards, 7 slicers and analytical visuals	PASS
Department Analytics	6 KPI cards, 7 slicers and analytical visuals	PASS
Resource Utilization	6 KPI cards, 6 slicers and analytical visuals	PASS

6. User Acceptance Testing Checklist

- ✓ **PASS** — Select a hospital and confirm the dashboard updates to the selected hospital.
- ✓ **PASS** — Select a department and confirm department-level visuals update.
- ✓ **PASS** — Change the admission-date period and verify trend visuals update.
- ✓ **PASS** — Check navigation between all four dashboard pages.
- ✓ **PASS** — Check KPI cards and charts for readability and consistent formatting.
- ✓ **PASS** — Verify department comparison visuals show the intended categories.
- ✓ **PASS** — Verify resource utilization visuals show the intended capacity and utilization measures.
- ✓ **PASS** — Refresh the dataset and confirm the dashboard continues to load correctly.

7. Final Testing Result

FINAL STATUS: PASS

The MedTrack Hospital Dashboard satisfies the defined dashboard coverage and functional testing requirements. The four required analytical areas—Hospital Overview, Patient Flow, Department Analytics and Resource Utilization—are represented with KPIs, visuals, filters and navigation.

Dataset-quality observations identified during validation are treated as documented dataset conditions and do not prevent dashboard validation.

8. Sign-Off

Testing Result	PASS
Dashboard Status	Ready for UAT / Presentation
Prepared For	MedTrack Hospital Dashboard Project
Date	18 August 2026
