

MedTrack_DV Hospital Operations & Patient Analytics

Milestone 3: Dashboard Development

Modules Covered:

- Module 5: Hospital Overview & Patient Flow
- Module 6: Department Analytics & Resource Utilization

Tools Used:

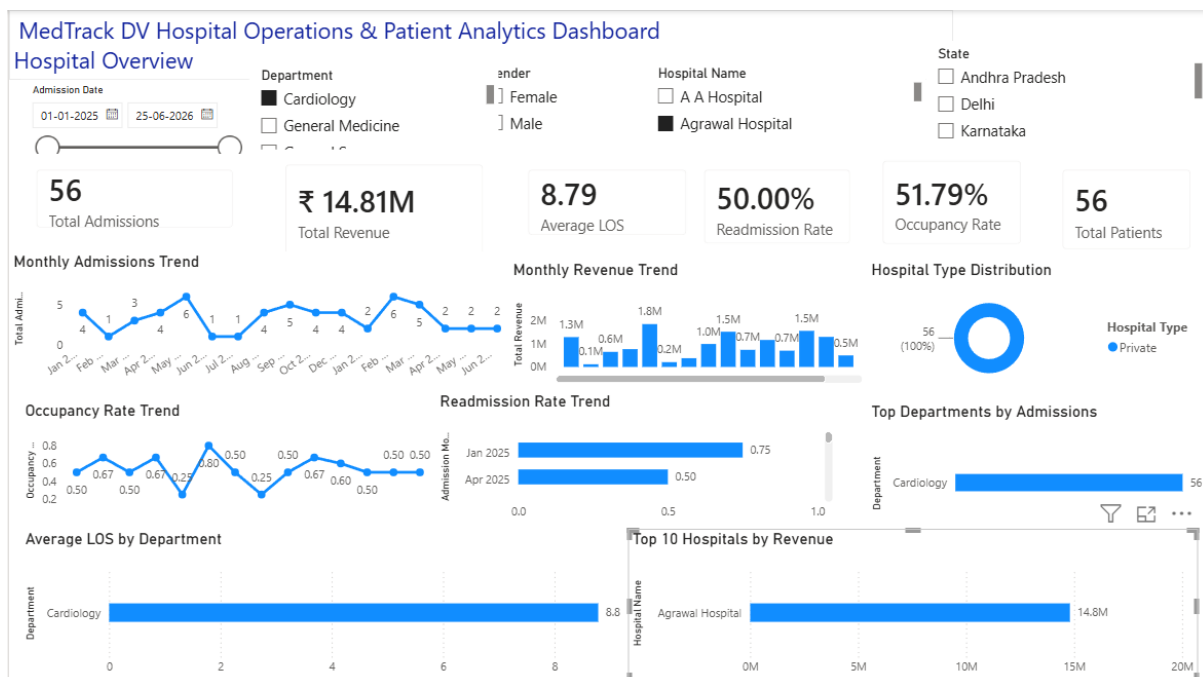

- Microsoft Power BI
- DAX
- Power Query

Dataset:

Hospital Operations & Patient Analytics Dataset

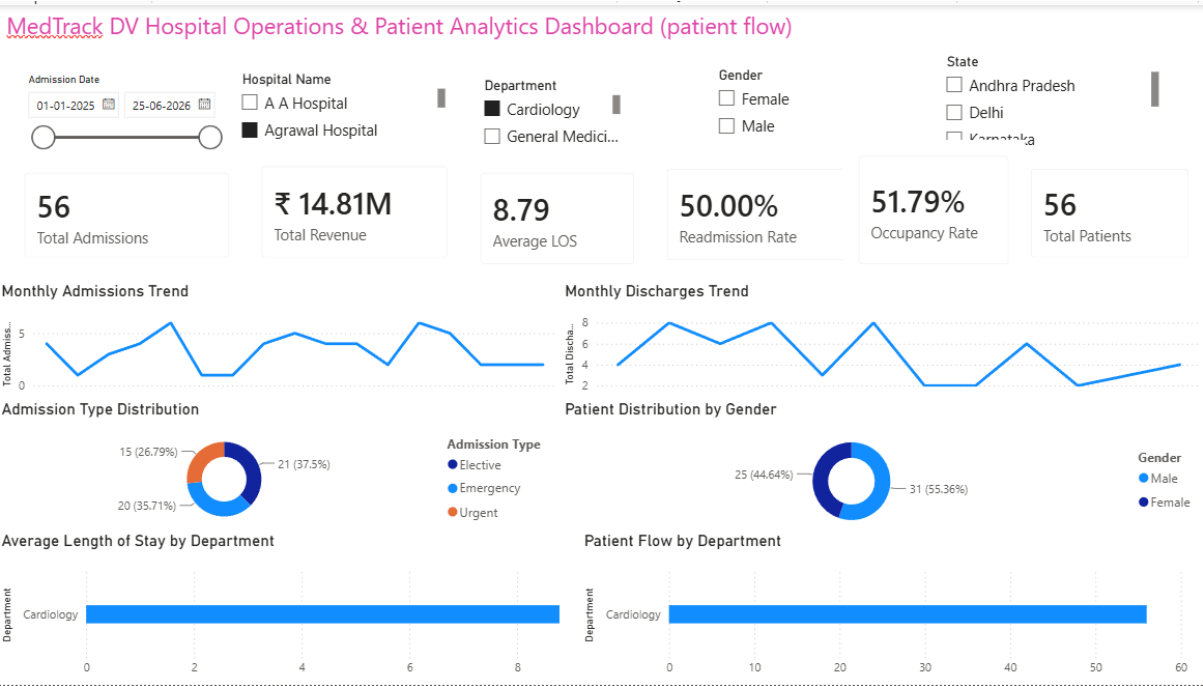

Dashboard 1: Hospital Overview

The Hospital Overview dashboard provides a high-level view of hospital operations and patient performance. It includes key performance indicators, admission trends, occupancy monitoring, readmission analysis, revenue trends, and department-level comparisons.

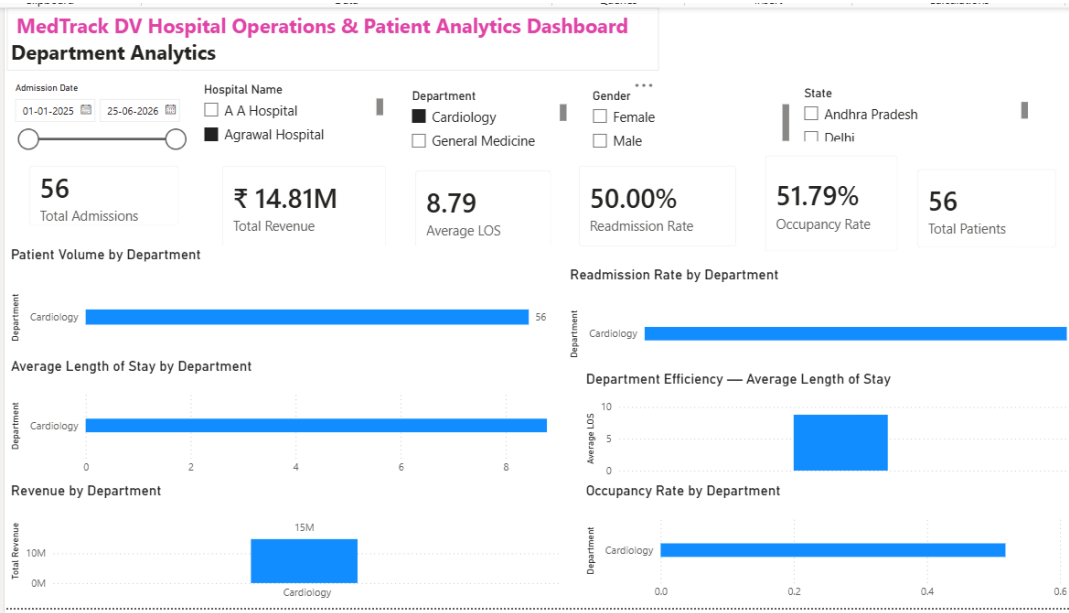

Dashboard 2: Patient Flow

The Patient Flow dashboard focuses on patient admissions, discharges, average length of stay, patient movement, and patient volume trends. It helps provide an overview of patient flow patterns across the hospital.

Dashboard 3: Department Analytics

The Department Analytics dashboard compares departments based on patient volume, readmission rate, average length of stay, occupancy, revenue, and other operational indicators. It helps identify differences in departmental performance.

Dashboard 4: Resource Utilization

The Resource Utilization dashboard focuses on hospital capacity and resource availability. It provides insights into bed occupancy, available beds, ICU capacity, staff allocation, occupied beds, and resource availability across departments.
